-  Biometric Enrolment & Pass Issuance

POST-ONBOARDING

-  Mark Injury, Quality Deviation, & Non-compliance
-  Prompt Worker Profile Verification
-  Contractor KPI Evaluation Matrix
-  Supplier KPI Evaluation Matrix
-  Non-Compliance Alerts lest Suspension of Access Rights

we|COM

Critical infrastructures such as airports, seaports, manufacturing industries, oil & gas units deploy workers either short-term or long-term for multi-disciplinary roles and responsibilities. Meeting the statutory guidelines concerning safety and security, as well as vetting the contractor profile along with ensuring unique physical identity for each poses a significant challenge to the security department of an organization.

IDCUBE's we|COM (Contractor On-boarding & Management) is an add-on module to the Access360 software suite for the digitization of contractor on-boarding procedures and compliances. It further helps in contractor, supplier, vendor evaluation as per the organization's safety benchmarks.

In addition to streamlining the contractor on-boarding procedures, it secures your premises by preventing unwanted workers through a biometric identity verification tool and expedites the review process.

Biometric verification followed by biometric enrolment, pass issuance, and grant of access control rights ensure a unique physical identity for each contractor and secure access control to the facility.
